Turn Signal w/TTB Wiring Plan

Relay - L Relay - R Relay - Running

One (or two) diodes = turn One diode = running

Amber & Red LED strips have THREE diodes for each LED chip

This diagram shows just 4 LED strips for TS illustration purposes but for longer trailers you'll likely need to add another set of LED strips in front of the axles.

One diode red is used for the TS

One diode red for running. ...One diode for brakes.
